Development of infrastructure

2011-03-15

The authors of the City's transportation projects strive to ensure modern and comfortable travels within the agglomeration and smooth passing by crowded streets by the transit transport.

The modernisation of the transportation system will lead to the reduction of pollution emission and the increased safety on roads.

In recent years the City authorities have executed a number of investments that have considerably contributed to solving many transportation problems and have made many areas available for commercial investments.
