

Kraków – Nowa Huta of the Future

Description of the project:

"Kraków – Nowa Huta of the Future" is a strategic, almost revolutionary concept for the revival of the eastern part of Kraków.

The project is aimed at the comprehensible revitalisation of post-industrial areas in the eastern part of the Nowa Huta district, with regard to its infrastructure, urban and social functions. The project is also aimed at the management of the area in a manner that will make the district more attractive to investors, municipal community and tourists. The core areas of the project are located around Igołomska Street, which is the axis for the development of the project of "Kraków – Nowa Huta of the Future". The comprehensible concept for the social and economic revival of the eastern part of Krakow, includes the development of four projects which – due to the synergy effect – will make the area more attractive to the citizens of Kraków and investors.

The strategic project of "Kraków – Nowa Huta of the Future" provides that four, separate investment tasks will be implemented:

- Branice Park of Science and Technology,
- Logistic Centre – an economic activity zone,
- Błonia 2.0 – the Centre of Large-Scale Cultural Events,
- Przylasek Rusiecki – area for recreation and leisure activities, with accompanying tourist services.

Location

The borders of the project are delineated by:

- the railway line and the Kraków ring road in the north,
- the borders of the Municipality of Kraków in the east,
- the Vistula River in the south and
- Bulwarowa and Klasztorna Streets in the west.

Area

584.83 ha

The area consists of ca 650 plots of various legal and ownership statuses.

General outline of the undertaking

- The project of the Park of Science and Technology provides that an industrial park infrastructure will be created in order to support innovation and entrepreneurship in the region by actions stimulating the opening and development of SMES on the local market, along with opportunities to carry out industrial operations and render services.
- The Logistic Centre project provides that a logistic centre infrastructure will be created to perform logistic, support and additional services in order to enable smooth flow of goods, minimize arduousness of logistic activities, and to stimulate the development of economic activities in the sector of logistic and logistic-related services.
- "Błonia 2.0" task provides the creation of an infrastructure for large-scale cultural events addressed to the residents of the Małopolska Voivodship, Poland and foreign countries. The functional infrastructure of the centre will enable the organisation of cultural, sports and religious events.
- The revival of Przylasek Rusiecki provides the creation of an infrastructure for recreation and leisure activities in spare time, addressed to the citizens of Kraków.

The development of the undertaking will be based on the development of the transportation system, including:

- the improvement of Igołomska street technical parameters,
- construction of a ring road around the Ruszcza settlement, which will move road transit traffic outside the developed area,
- the construction of a cycle track and pedestrian streets with a track for in-line-skaters running in the south-north direction, linking all the areas covered by the strategic project of "Kraków – Nowa Huta of the Future",
- the construction of internal transportation systems within the areas of each task. Inarious functions in the region. It will also have a supra-regional effect.

In addition thereto, the technical infrastructure, currently existing in the area of the investment project, will be enhanced.
