Krakow among Cities of the Future

2020-06-23

Once again, Krakow is ranked one of the most technologically advanced "cities of the future". The international rating Top 25 Tech Cities of the Future 2020/2021 is prepared by the prestigious fDi Magazine.

The ranking was prepared by the analytical team of fDi Intelligence magazine, a section of The Financial Times group. The data was collected using specialized internet tools such as fDi Benchmark and fDi Markets as well as other sources. Information was collected for 76 locations, in five categories: economic potential, innovation and attractiveness, Foreign Direct Investment performance, cost effectiveness and startup environment. A sixth category survey was also prepared - fDi Strategy, for which 50 applications were entered. Locations in the top twenty in this category received additional points, which influenced their overall ranking score.
